

AMD Ryzen and HyperX Compatibility

The HyperX memory team has done extensive compatibility testing on the AMD Ryzen platform. With our focus on the X370 / B350 chipsets and the R7 1700 / R7 1700X / R7 1800X processors, we have compiled a list of parts we recommend to help you get the most out of your AMD Ryzen system. Based on the broad compatibility testing we've performed, we expect these modules and kits to work at the factory

tested and programmed speeds / timings, however some system boards may limit memory speed / timings based on the board design and BIOS.

If you have any configuration questions please contact our support team at hyperxgaming.com/support.
