

Understanding What's New in SSD Technology

NVMe (Non-Volatile Memory Express) is a communications interface and driver that defines a command set and feature set for PCIe-based SSDs with the goals of increased and efficient performance and interoperability on a broad range of enterprise and client systems.

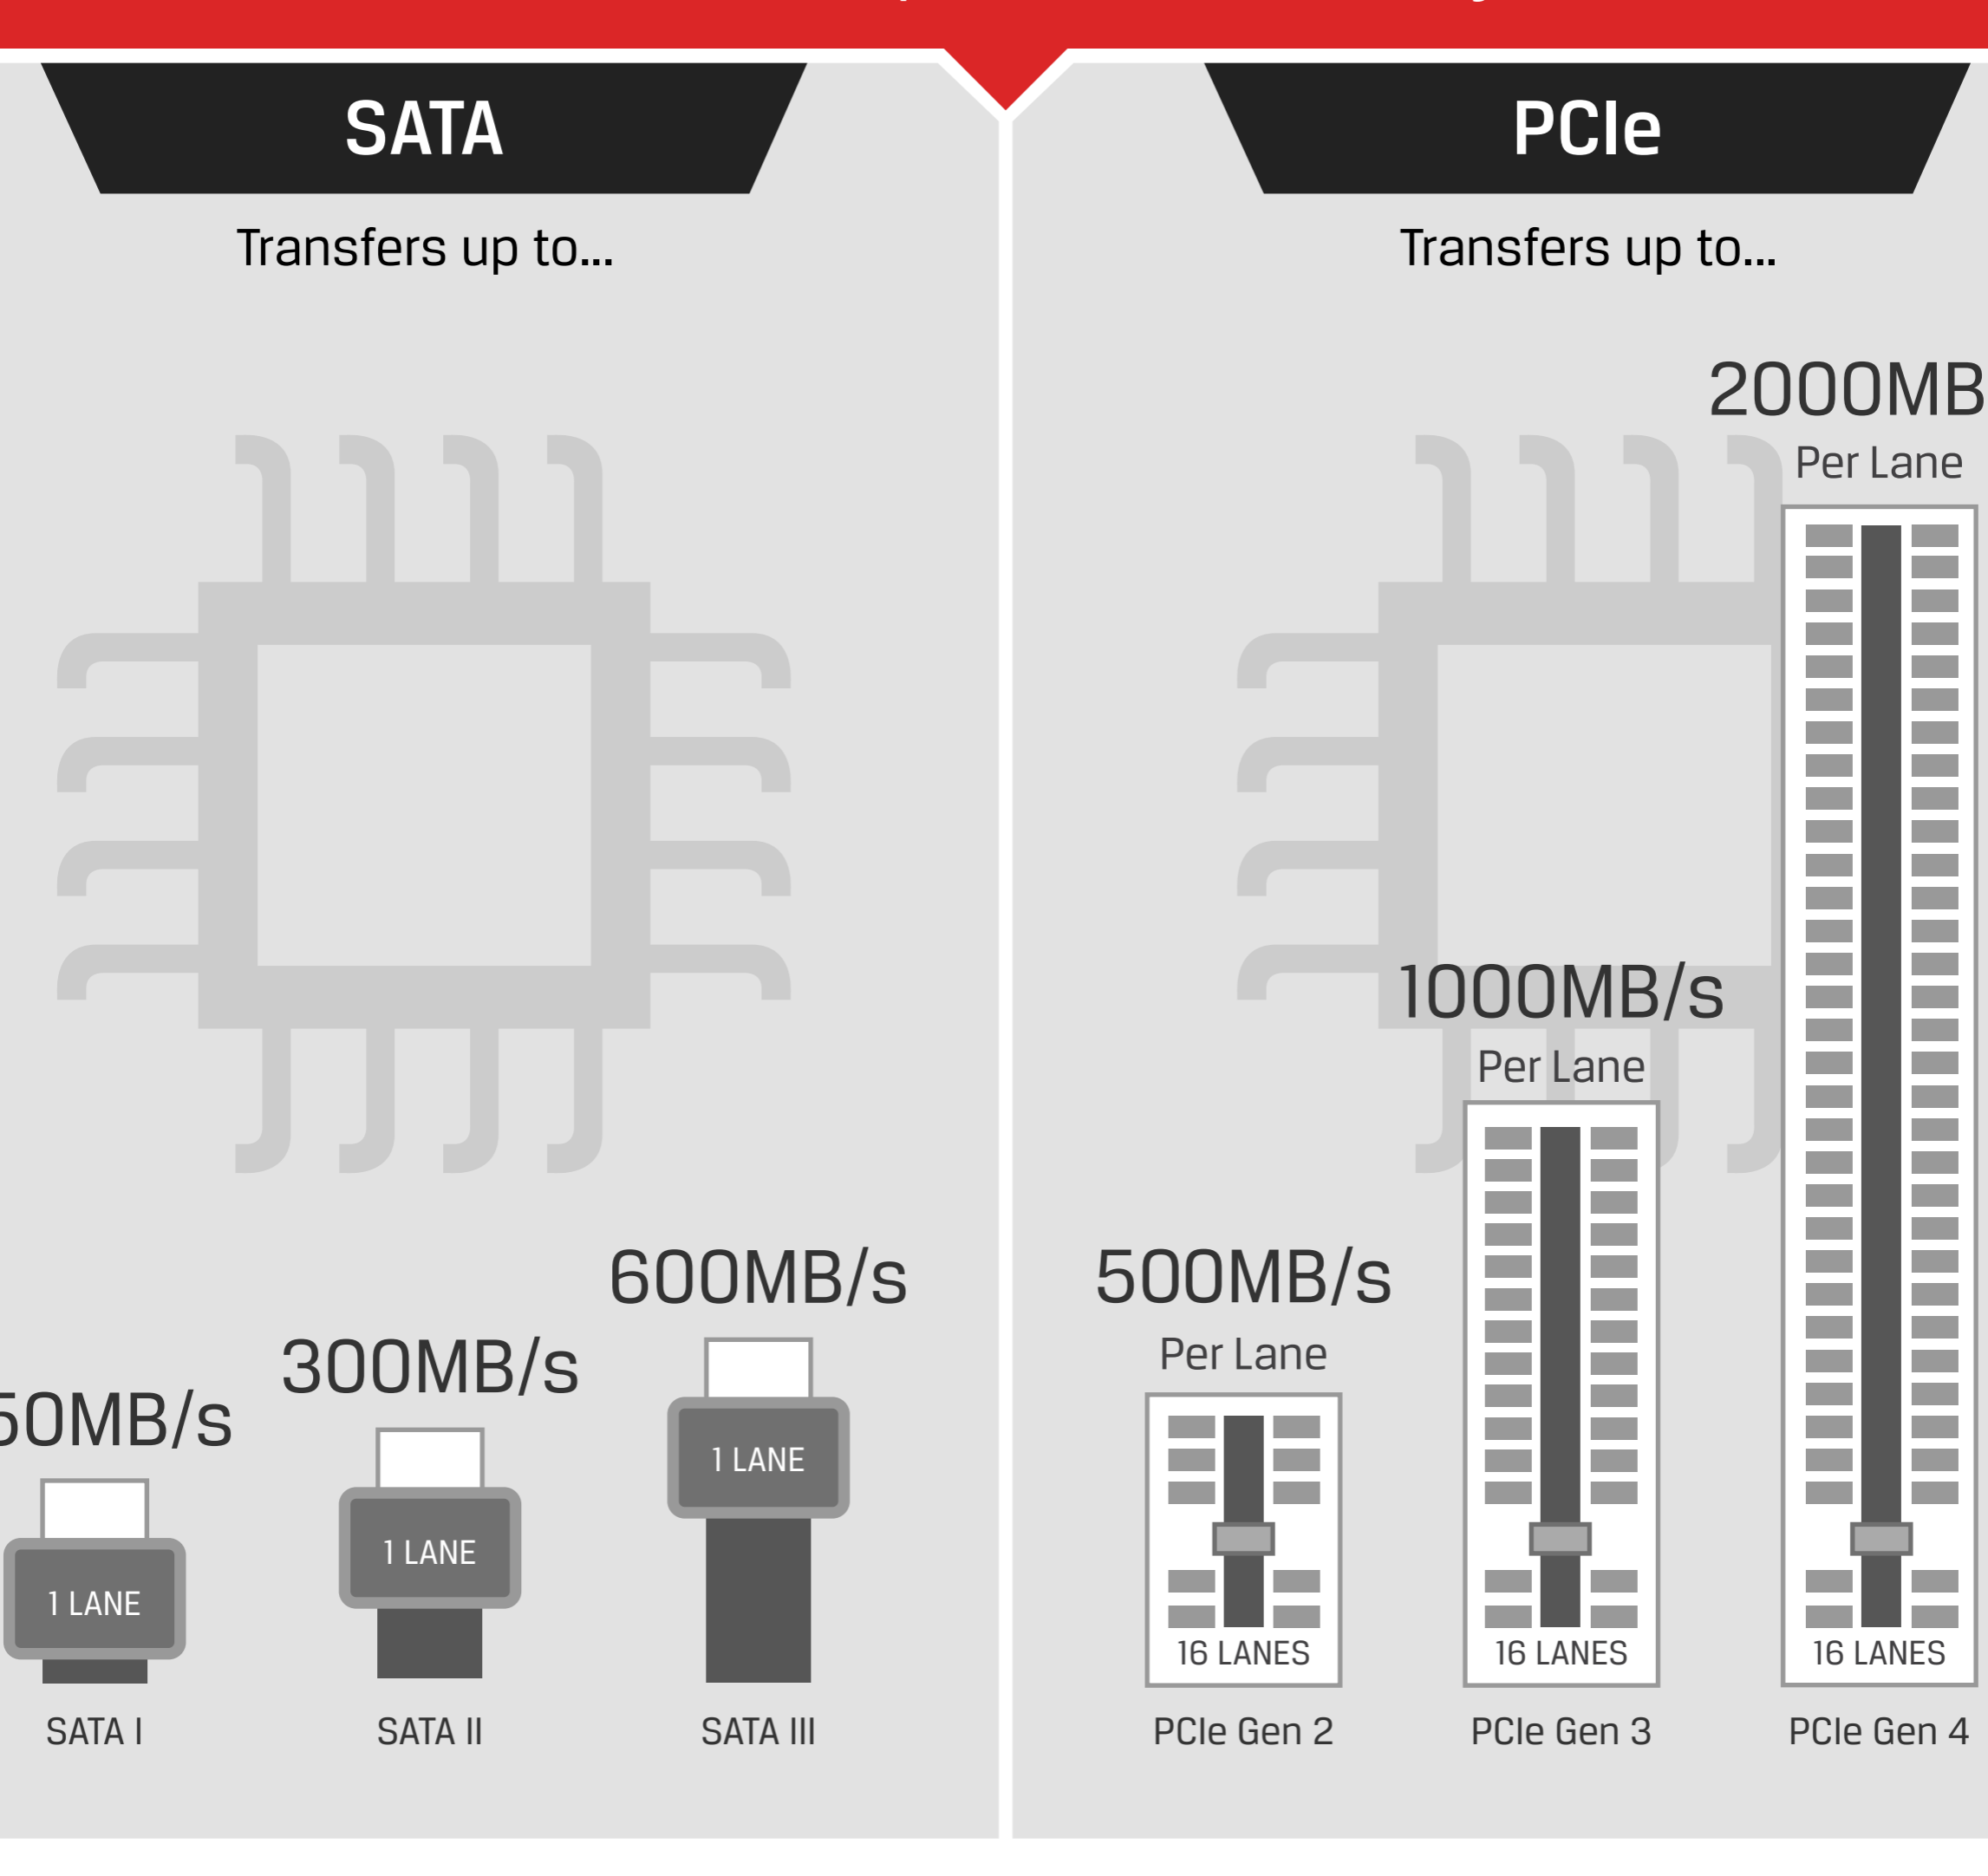

NVMe was designed for SSD. It communicates between the storage interface and the System CPU using high-speed PCIe sockets, independent of storage form factor.

Input/Output tasks performed using NVMe drivers begin faster, transfer more data, and finish faster than older storage models using older drivers, such as AHCI (Advanced Host Controller Interface). Because it was designed specifically for SSDs, NVMe is becoming the new industry standard.

DATA BUSES: Transport data within a system

Using 16 lanes, PCIe Gen 4 can transfer data at 32,000MB/s

Communication Drivers

Used by Operating Systems to communicate data with storage devices

AHCI	NVMe
Designed for Hard Drives with Spinning Disk technology	Designed for SSDs with Flash technology
Has only 1 command queue	Has 64K command queues
Can only send 32 commands per queue	Can send 64K commands per queue
Commands utilize High CPU cycles	Commands utilize Low CPU cycles
Has a latency of 6 microseconds	Has a latency of 2.8 microseconds
Must communicate with the SATA controller	Communicates directly with the System CPU
IOPs up to 100K	IOPs over 1 million

SSD Form Factors

The shapes and sizes of solid-state storage

SATA	PCIe
<p>2.5"</p> <p>1.8"</p> <p>mSATA (designed for smaller form factor systems)</p> <p>M.2 (supports AHCI version)</p>	<p>HHHL - Half Height, Half Length (also called AIC or Add-In Card)</p> <ul style="list-style-type: none"> AHCI versions of these drives plug into the PCIe slot, but use the AHCI drivers Some older versions of HHHL use proprietary drivers NVMe versions typically use native OS drivers <p>M.2 (supports NVMe version)</p> <p>U.2 (only available in NVMe)</p>

Beyond the Numbers

Benefits of NVMe Technology

Optimal Performance

<p>Superior Storage</p> <p>PCIe sockets transfer >25x more data than their SATA equivalent</p>	<p>Superior Speed</p> <p>NVMe begins sending commands more than 2x faster than AHCI drivers</p> <p>NVMe Input/Output Operations per Second exceeds 1 million and is up to 900% faster than its AHCI equivalent</p>	<p>Superior Compatibility</p> <p>NVMe cuts out the middle man by communicating directly with the System CPU</p> <p>NVMe-based drives work with all major Operating Systems, regardless of form factor</p>
