KEY FEATURES

- Double-data-rate architecture: two data transfers per clock cycle
- The high-speed data transfer is realized by the 8 bits prefetch pipelined architecture
- Bi-directional differential data strobe (DQS and /DQS) is transmitted/received with data for capturing data at the receiver
- DQS is edge-aligned with data for READs; center- aligned with data for WRITEs
- Differential clock inputs (CK t and CK c)
- DLL aligns DQ and DQS transitions with CK transitions
- Data mask (DM) write data-in at the both rising and falling edges of the data strobe
- Write Cycle Redundancy Code (CRC) is supported
- Programmable preamble for read and write is supported
- Programmable burst length 4/8 with both nibble sequential and interleave mode
- BL switch on the fly
- Driver strength selected by MRS
- Dynamic On Die Termination supported
- Two Termination States such as RTT PARK and RTT NOM switchable by ODT pin
- Asynchronous RESET pin supported
- ZQ calibration supported
- Write Levelization supported
- This product in compliance with the RoHS directive
- Internal Vref DQ level generation is available
- TCAR (Temperature Controlled Auto Refresh) mode is supported.
- LP ASR (Low Power Auto Self Refresh) mode is supported
- Command Address (CA) Parity (command/address) mode is supported
- Per DRAM Addressability (PDA)
- Fine granularity refresh is supported
- Geardown Mode(1/2 rate, 1/4 rate) is supported
- Self Refresh Abort is supported
- Maximum power saving mode is supported
- Banks Grouping is applied, and CAS to CAS latency (tCCD L, tCCD S) for the banks in the same or different bank group accesses are available
- DMI pin support for write data masking and DBIdc functionality
