

SM2280S3G2 Firmware Update Instructions (FW Rev. SAFM01.W)

Platform

- PC with M.2 interface

System Preparation

- As a precaution, perform a backup of all your data to ensure no data is lost during the firmware update process
- Do not unplug power at any time during the firmware update
- Use only native M.2 sockets to perform upgrade. Do NOT use third party adapters
- Notebook users, please use AC power to prevent any power loss during firmware upgrade

Steps

1. Download the SM2280S3G2 Firmware Update ISO if you haven't already done so.
2. Create bootable USB drive based on the SM2280S3G2_to_SAFM01.W.iso file.
Note: There are a variety of software options available that will allow you to create a bootable USB drive based on an ISO file, but we've had success with Rufus: <https://rufus.akeo.ie/>
3. Boot from USB drive and select "live – boot the Live system"
4. Follow the onscreen prompts to update target drive.
5. Update your drive. When successful, you will see:
 - a. The SSD Firmware has been updated on drive [serial number]
 - b. Power cycle is required to see and use the new code.
6. Shutdown system.
7. Power on system and use drive as normal.
