The 2.5mm adhesive adapter assembly is designed for 7mm drives that require installation in a standard 9.5mm HDD bay. This adapter will fit your 7mm SSD. Consult your computer system documentation to determine if you need to utilize this adapter for proper SSD installation.

Handling Precautions

To prevent damage from static electricity, observe the following precautions:

- Allow the drive to remain in the anti-static container until you are ready to install the SSD adhesive adapter.
- Use care in handling the drive. Do not touch the connectors.
- Do not disassemble or remove the casing of the drive as this action voids the warranty.
- Wear a wrist strap and connect the ground strap to the computer case to minimize static electricity
- Turn off the power to your desktop or notebook and disconnect the power source. Additionally, remove the battery pack from your notebook.

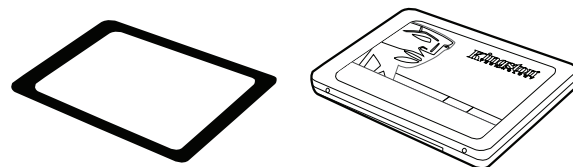

The following step-by-step instructions will guide you through installation of the adapter.

Getting Started

You will need the following materials to adhere the 2.5mm adapter to your 7mm SSD for use in a standard 9.5mm Notebook HDD bay:

- (1) 2.5mm Adhesive Adapter (part no. 3341517)
- (1) Kingston® SSDNow 7mm SSD.

- 1) Remove your 7mm SSD and the 2.5mm adapter from the packaging. Make sure that the SSD label is face up before proceeding. (Figure 1.)
- 2) Ensure that the surface of the SSD is clear of debris and dust before attempting to adhere the adapter.
- 3) Carefully remove the adhesive backing from the 2.5mm adapter bracket, align it with the outer edges of the SSD and firmly press the adhesive side onto the SSD surface. When installed correctly, the adapter will be flush with the outer edges of your SSD. (Figure 2.)
- 4) Once the bracket is affixed to the SSD, you are ready to begin the SSD installation process. Please refer to the included CD or SSD Installation insert for instructions on how to proceed with your SSD installation.
